TRIED & TESTED. No Frills; More Protection

B+ 20

CHAINSAW OP. TROUSERS

*

The traditional Design B of the standard EN 381-5, historically chosen by the SA Forestry Industry, backed by FESA and SABS due to the essential femoral artery protection for both left & right legs. Foresters have come to appreciate and rely on this extra safety feature exclusive to our B+20's trusted for over 15 years.

**

The calf coverage in our B+20 and Buffalo is an extension we added to the chain clogging pad for SA chainsaw operators - no other product offers this feature. *Studies quantified in the SA Chainsaw Safety and Operating Handbook (produced by FESA & ICFR), reveal that 12% of leg injuries occur in the calf area.* Only our B+20's offer both EU certification and calf protection.

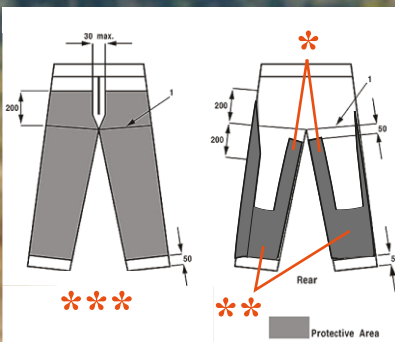

Our durable outer protects the chain clogging pad from brambles, oil, petrol and water - increasing the durability and life span of these trousers.

B+20 trousers don't have side pockets to prevent blocking the chain clogging pad with phones/pens etc, that could shatter injuring the wearer or hampering the chain clogging action.

We believe the fewer "snagging hazards" the better (that is why we keep our design simple - no extra zips, buttons etc).

Our B+20 has been trusted by foresters for more than 15 years.
